Devlin K., Churcher C.M., Barrell B.G., Rajandream M.A., Submitted (MAR-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CATALYZES THE RELEASE OF FATTY ACIDS FROM LYSOPHOSPHOLIPIDS.
-!- CATALYTIC ACTIVITY: 2-lysophosphatidylcholine + H(2) glycerophosphocholine + a fatty acid anion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SUBCELLULAR LOCATION: Secreted.

Isolation and sequence of the cDNAs encoding the subunits o
isozyme form of wheat protein synthesis initiation factor 4F
J. Biol. Chem. 267:2323-23236(1992).
-!- FUNCTION: RECOGNIZES AND BINDS THE 7-METHYLGUANOSINE-CON
MRNA "CAP" DURING AN EARLY STEP IN THE INITIATION OF PRO
SYNTHESIS AND FACILITATES RIBOSOME BINDING BY INDUCING T
UNWINDING OF THE MRNAS SECONDARY STRUCTURES.
-!- SUBUNIT: EIF4F HAVE BEEN IDENTIFIED, NAMED EIF4F AND
EIF(ISO)4F. EIF4F HAS SUBUNITS P220 AND P28, WHEREAS EIF
HAS SUBUNITS P82 AND P26.
-!- SIMILARITY: BELONGS TO THE EUKARYOTIC INITIATION FACTOR

"Oxygen deprivation stimulates Ca2+ mediated phosphorylation of mRNA cap-binding protein e1F4E in maize roots.";
Submitted (JUL-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: RECOGNIZES AND BINDS THE 7-METHYLGUANOSINE-CONTAINING MRNA "CAP" DURING AN EARLY STEP IN THE INITIATION OF PROTEIN SYNTHESIS AND FACILITATES RIBOSOME BINDING BY INDUCING THE UNWINDING OF THE MRNAS SECONDARY STRUCTURES.
-!- SUBUNIT: E1F4F IS A TRIMER COMPOSED OF E1F4E, E1F4G AND E1F4A (WHICH CAN CYCLE IN AND OUT OF THE COMPLEX). IN HIGHER PLANTS TWO ISOFORMS OF E1F4F HAVE BEEN IDENTIFIED, NAMED E1F4F AND E1F4 HANS SUBUNITS P220 AND P28, WHEREAS E1F-(ISO)4F

J. Gen. Microbiol. 139:1401-1407(1993).

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosid:
linkages in oligosaccharides and polysaccharides.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES,
KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro; IPR000461; Alpha_amylase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             large non-coding region.";
J. Gen. Microbiol. 139:1401-1407(1993).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in oligosaccharides and polysaccharides.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STRAIN-JA11;

I transcription from E2F-responsive promoters.";

Nat. Genet. 25:338-342(2000).

-!- FUNCTION: PROBABLY ACTS AS A REGULATOR OF OTHER GENES. FORMS A COMPLEX WITH ADENOVIRUS E1A AND WITH SV40 LARGE T ANTIGEN. ACTS AS A TUMOR SUPPRESSOR. MAY BIND AND MODULATE FUNCTIONALLY CERTAIN CELLULAR PROTEINS WITH WHICH T AND E1A COMPETE FOR POCKET BINDING.

POTENT INHIBITOR OF E2F-MEDIATED TRANS-ACTIVATION.

-!- SUBUNIT: INTERACTS WITH TRANSCRIPTION FACTOR E2F1 AND WITH DNMT1

(By similarity).

-!- SUBCELLULAR LOCATION: Nuclear.

-!- SUBCELLULAR LOCATION: Nuclear.

-!- PTM: PHOSPHORYLATED FROM S TO M PHASE OF THE CELL CYCLE AND IS

UNPHOSPHORYLATED FROM (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AS

C. '!- FUNCTION: PROBABLY ACTS AS A REGULATOR OF OTHER GENES. FORMS A COMPLEX WITH ADENOVIRUS E1A AND WITH SV40 LARGE T ANTIGEN. ACTS AS A TUMOR SUPPRESSOR. MAY BIND AND MODULATE FUNCTIONALLY CERTAIN CELLULAR PROTEINS WITH WHICH T AND E1A COMPETE FOR POCKET BINDING.

CELLULAR PROTEINS WITH TRANSCRIPTION FACTOR E2F1 AND WITH DNMT1 (BY similarity).

                                                                                      J. Biol. Chem. 276:6485-6498(2001).

J. Biol. Chem. 276:6485-6498(2001).

-!- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IIb/beta-3.

-!- SUBUNIT: Homotrimer; disulfide-linked.

-!- SIMILARITY: BELONGS TO THE THROMBOSPONDIN FAMILY.

-!- SIMILARITY: CONTAINS 3 EGF-LIKE DOMAINS.

-!- SIMILARITY: CONTAINS 3 TSP TYPE-1 DOMAINS.

-!- SIMILARITY: CONTAINS 7 TSP TYPE-3 DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      , CALCIUM-BINDING (POTENTIAL)

  FUNCTION: CAN INTRODUCE NEGATIVE SUPERHELICADOUBLE-STRANDED CIRCULAR DNA.
CATALYTIC ACTIVITY: ATP-dependent breakage, of double-stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         245 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 28; DB Pred. NOT INDUCED FRUCTOSE OR XYLULOSE.
MISCELLANEOUS: THIS ENZYME IS SPECIFIC FOR XYLULOSE.
MISCELLANEOUS: THE MTLY PROTEIN IS ENCODED BY THE MTL EFGKE OPERON. THIS OPERON ENCODES PROTEINS FOR THE UPTAKE AND UTILIZATION OF MANNITOL, ARABITOL AND SORBITOL.
SIMILARITY: BELONGS TO THE FUCOKINASE / GLUCONOKINASE / GLYCEROKINASE / XYLULOKINASE FAMILY.
